Operating Manual

Rev. AB
Operating Features: Date: October 2, 2007

Manual # 0-4961
WE APPRECIATE YOUR BUSINESS!

Congratulations on your new Thermal Dynamics product. We are proud to have you as our customer and will strive to provide you with the best service and reliability in the industry. This product is backed by our extensive warranty and world-wide service network. To locate your nearest distributor or service agency call 1-800-426-1888, or visit us on the web at www.thermal-dynamics.com.

This Operating Manual has been designed to instruct you on the correct use and operation of your Thermal Dynamics product. Your satisfaction with this product and its safe operation is our ultimate concern. Therefore please take the time to read the entire manual, especially the Safety Precautions. They will help you to avoid potential hazards that may exist when working with this product.

YOU ARE IN GOOD COMPANY!

The Brand of Choice for Contractors and Fabricators Worldwide.

Thermal Dynamics is a Global Brand of manual and automation Plasma Cutting Products for Thermadyne Industries Inc.

We distinguish ourselves from our competition through market-leading, dependable products that have stood the test of time. We pride ourselves on technical innovation, competitive prices, excellent delivery, superior customer service and technical support, together with excellence in sales and marketing expertise.

Above all, we are committed to developing technologically advanced products to achieve a safer working environment within the welding industry.
WARNING

Read and understand this entire Manual and your employer’s safety practices before installing, operating, or servicing the equipment.

While the information contained in this Manual represents the Manufacturer’s best judgement, the Manufacturer assumes no liability for its use.

SECTION 1: GENERAL INFORMATION

1.01 Notes, Cautions and Warnings

Throughout this manual, notes, cautions, and warnings are used to highlight important information. These highlights are categorized as follows:

**NOTE**
An operation, procedure, or background information which requires additional emphasis or is helpful in efficient operation of the system.

**CAUTION**
A procedure which, if not properly followed, may cause damage to the equipment.

**WARNING**
A procedure which, if not properly followed, may cause injury to the operator or others in the operating area.

1.02 Important Safety Precautions

**WARNING**
OPERATION AND MAINTENANCE OF PLASMA ARC EQUIPMENT CAN BE DANGEROUS AND HAZARDOUS TO YOUR HEALTH.

Plasma arc cutting produces intense electric and magnetic emissions that may interfere with the proper function of cardiac pacemakers, hearing aids, or other electronic health equipment. Persons who work near plasma arc cutting applications should consult their medical health professional and the manufacturer of the health equipment to determine whether a hazard exists.

To prevent possible injury, read, understand and follow all warnings, safety precautions and instructions before using the equipment. Call 1-603-298-5711 or your local distributor if you have any questions.

**GASES AND FUMES**
Gases and fumes produced during the plasma cutting process can be dangerous and hazardous to your health.

- Keep all fumes and gases from the breathing area. Keep your head out of the welding fume plume.
- Use an air-supplied respirator if ventilation is not adequate to remove all fumes and gases.
- The kinds of fumes and gases from the plasma arc depend on the kind of metal being used, coatings on the metal, and the different processes. You must be very careful when cutting or welding any metals which may contain one or more of the following:
  - Antimony
  - Arsenic
  - Barium
  - Beryllium
  - Cadmium
  - Chromium
  - Cobalt
  - Copper
  - Lead
  - Manganese
  - Mercury
  - Nickel
  - Selenium
  - Silver
  - Vanadium
- Always read the Material Safety Data Sheets (MSDS) that should be supplied with the material you are using. These MSDSs will give you the information regarding the kind and amount of fumes and gases that may be dangerous to your health.
- For information on how to test for fumes and gases in your workplace, refer to item 1 in Subsection 1.03, Publications in this manual.
- Use special equipment, such as water or down draft cutting tables, to capture fumes and gases.
- Do not use the plasma torch in an area where combustible or explosive gases or materials are located.
- Phosgene, a toxic gas, is generated from the vapors of chlorinated solvents and cleansers. Remove all sources of these vapors.
- This product, when used for welding or cutting, produces fumes or gases which contain chemicals known to the State of California to cause birth defects and, in some cases, cancer. (California Health & Safety Code Sec. 25249.5 et seq.)
Electric Shock can injure or kill. The plasma arc process uses and produces high voltage electrical energy. This electric energy can cause severe or fatal shock to the operator or others in the workplace.

- Never touch any parts that are electrically “live” or “hot.”
- Wear dry gloves and clothing. Insulate yourself from the work piece or other parts of the welding circuit.
- Repair or replace all worn or damaged parts.
- Extra care must be taken when the workplace is moist or damp.
- Install and maintain equipment according to NEC code, refer to item 9 in Subsection 1.03, Publications.
- Disconnect power source before performing any service or repairs.
- Read and follow all the instructions in the Operating Manual.

Fire and explosion can be caused by hot slag, sparks, or the plasma arc.

- Be sure there is no combustible or flammable material in the workplace. Any material that cannot be removed must be protected.
- Ventilate all flammable or explosive vapors from the workplace.
- Do not cut or weld on containers that may have held combustibles.
- Provide a fire watch when working in an area where fire hazards may exist.
- Hydrogen gas may be formed and trapped under aluminum workpieces when they are cut underwater or while using a water table. **DO NOT** cut aluminum alloys underwater or on a water table unless the hydrogen gas can be eliminated or dissipated. Trapped hydrogen gas that is ignited will cause an explosion.

Noise can cause permanent hearing loss. Plasma arc processes can cause noise levels to exceed safe limits. You must protect your ears from loud noise to prevent permanent loss of hearing.

- To protect your hearing from loud noise, wear protective ear plugs and/or ear muffs. Protect others in the workplace.
- Noise levels should be measured to be sure the decibels (sound) do not exceed safe levels.
- For information on how to test for noise, see item 1 in Subsection 1.03, Publications, in this manual.

Plasma Arc Rays can injure your eyes and burn your skin. The plasma arc process produces very bright ultra violet and infra red light. These arc rays will damage your eyes and burn your skin if you are not properly protected.

- To protect your eyes, always wear a welding helmet or shield. Also always wear safety glasses with side shields, goggles or other protective eye wear.
- Wear welding gloves and suitable clothing to protect your skin from the arc rays and sparks.
- Keep helmet and safety glasses in good condition. Replace lenses when cracked, chipped or dirty.
- Protect others in the work area from the arc rays. Use protective booths, screens or shields.
- Use the shade of lens as suggested in the following per ANSI/ASC Z49.1:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Less Than 300*</td>
<td>8</td>
<td>9</td>
</tr>
<tr>
<td>300 - 400*</td>
<td>9</td>
<td>12</td>
</tr>
<tr>
<td>400 - 800*</td>
<td>10</td>
<td>14</td>
</tr>
</tbody>
</table>

* These values apply where the actual arc is clearly seen. Experience has shown that lighter filters may be used when the arc is hidden by the workpiece.
1.03 Publications

Refer to the following standards or their latest revisions for more information:

2. ANSI Standard Z49.1, SAFETY IN WELDING AND CUTTING, obtainable from the American Welding Society, 550 N.W. LeJeune Rd, Miami, FL 33126

4. ANSI Standard Z87.1, SAFE PRACTICES FOR OCCUPATION AND EDUCATIONAL EYE AND FACE PROTECTION, obtainable from American National Standards Institute, 1430 Broadway, New York, NY 10018

5. ANSI Standard Z41.1, STANDARD FOR MEN’S SAFETY-TOE FOOTWEAR, obtainable from the American National Standards Institute, 1430 Broadway, New York, NY 10018

6. ANSI Standard Z49.2, FIRE PREVENTION IN THE USE OF CUTTING AND WELDING PROCESSES, obtainable from American National Standards Institute, 1430 Broadway, New York, NY 10018

7. AWS Standard A6.0, WELDING AND CUTTING CONTAINERS WHICH HAVE HELD COMBUSTIBLES, obtainable from American Welding Society, 550 N.W. LeJeune Rd, Miami, FL 33126

8. NFPA Standard 51, OXYGEN-FUEL GAS SYSTEMS FOR WELDING, CUTTING AND ALLIED PROCESSES, obtainable from the National Fire Protection Association, Batterymarch Park, Quincy, MA 02269

9. NFPA Standard 70, NATIONAL ELECTRICAL CODE, obtainable from the National Fire Protection Association, Batterymarch Park, Quincy, MA 02269

10. NFPA Standard 51B, CUTTING AND WELDING PROCESSES, obtainable from the National Fire Protection Association, Batterymarch Park, Quincy, MA 02269

11. CGA Pamphlet P-1, SAFE HANDLING OF COMPRESSED GASES IN CYLINDERS, obtainable from the Compressed Gas Association, 1235 Jefferson Davis Highway, Suite 501, Arlington, VA 22202

12. CSA Standard W117.2, CODE FOR SAFETY IN WELDING AND CUTTING, obtainable from the Canadian Standards Association, Standards Sales, 178 Rexdale Boulevard, Rexdale, Ontario, Canada M9W 1R3

13. NWSA booklet, WELDING SAFETY BIBLIOGRAPHY obtainable from the National Welding Supply Association, 1900 Arch Street, Philadelphia, PA 19103

1.04 Note, Attention et Avertissement

Dans ce manuel, les mots “note,” “attention,” et “avertissement” sont utilisés pour mettre en relief des informations à caractère important. Ces mises en relief sont classifiées comme suit:

**NOTE**

Toute opération, procédure ou renseignement général sur lequel il importe d’insister davantage ou qui contribue à l’efficacité de fonctionnement du système.

**ATTENTION**

Toute procédure pouvant résulter l’endommagement du matériel en cas de non-respect de la procédure en question.

**AVERTISSEMENT**

Toute procédure pouvant provoquer des blessures de l’opérateur ou des autres personnes se trouvant dans la zone de travail en cas de non-respect de la procédure en question.
1.05 Précautions De Securite Importantes

⚠️ AVERTISSEMENTS

L’OPÉRATION ET LA MAINTENANCE DU MATÉRIEL DE SOUDAGE À L’ARC AU JET DE PLASMA PEUVENT PRÉSENTER DES RISQUES ET DES DANGERS DE SANTÉ.

Coupant à l’arc au jet de plasma produit de l’énergie électrique haute tension et des émissions magnétique qui peuvent interférer la fonction propre d’un “pacemaker” cardiaque, les appareils auditif, ou autre matériel de santé electronique. Ceux qui travail près d’une application à l’arc au jet de plasma devrait consulter leur membre professionnel de médication et le manufacturier de matériel de santé pour déterminer s’il existe des risques de santé.

Il faut communiquer aux opérateurs et au personnel TOUS les dangers possibles. Afin d’éviter les blessures possibles, lisez, comprenez et suivez tous les avertissements, toutes les précautions de sécurité et toutes les consignes avant d’utiliser le matériel. Composez le + 603-298-5711 ou votre distributeur local si vous avez des questions.

🔥 FUMÉE et GAZ

La fumée et les gaz produits par le procédé de jet de plasma peuvent présenter des risques et des dangers de santé.

- Éloignez toute fumée et gaz de votre zone de respiration. Gardez votre tête hors de la plume de fumée provenant du chalumeau.

- Utilisez un appareil respiratoire à alimentation en air si l’aération fournie ne permet pas d’éliminer la fumée et les gaz.

- Les sortes de gaz et de fumée provenant de l’arc de plasma dépendent du genre de métal utilisé, des revêtements se trouvant sur le métal et des différents procédés. Vous devez prendre soin lorsque vous coupez ou soudez tout métal pouvant contenir un ou plusieurs des éléments suivants:

  - antimoine
  - argent
  - arsenic
  - baryum
  - béryllium
  - cadmium
  - chrome
  - cobalt
  - cuivre
  - manganèse
  - mercure
  - nickel
  - plomb
  - sélénium
  - vanadium

- Lisez toujours les fiches de données sur la sécurité des matières (sigle américain “MSDS”); celles-ci devraient être fournies avec le matériel que vous utilisez. Les MSDS contiennent des renseignements quant à la quantité et la nature de la fumée et des gaz pouvant poser des dangers de santé.

- Pour des informations sur la manière de tester la fumée et les gaz de votre lieu de travail, consultez l’article 1 et les documents cités à la page 5.

- Utilisez un équipement spécial tel que des tables de coupe à débit d’eau ou à courant descendant pour capter la fumée et les gaz.

- N’utilisez pas le chalumeau au jet de plasma dans une zone où se trouvent des matières ou des gaz combustibles ou explosifs.

- Le phosgène, un gaz toxique, est généré par la fumée provenant des solvants et des produits de nettoyage chlorés. Eliminez toute source de telle fumée.

- Ce produit, dans le procéder de soudage et de coupe, produit de la fumée ou des gaz pouvant contenir des éléments reconnu dans l’État de la Californie, qui peuvent causer des défauts de naissance et le cancer. (La sécurité de santé en Californie et la code sécurité Sec. 25249.5 et seq.)

⚡ CHOC ELECTRIQUE

- Ne touchez jamais une pièce “sous tension” ou “vive”; portez des gants et des vêtements secs. Isolez-vous de la pièce de travail ou des autres parties du circuit de soudage.

- Réparez ou remplacez toute pièce usée ou endommagée.

- Prenez des soins particuliers lorsque la zone de travail est humide ou moite.

- Montez et maintenez le matériel conformément au Code électrique national des Etats-Unis. (Voir la page 5, article 9.)

- Débranchez l’alimentation électrique avant tout travail d’entretien ou de réparation.

- Lisez et respectez toutes les consignes du Manuel de consignes.

🔥 INCENDIE ET EXPLOSION
Les incendies et les explosions peuvent résulter des scories chaudes, des étincelles ou de l’arc de plasma. Le procédé à l’arc de plasma produit du métal, des étincelles, des scories chaudes pouvant mettre le feu aux matières combustibles ou provoquer l’explosion de fumées inflammables.

- Soyez certain qu’aucune matière combustible ou inflammable ne se trouve sur le lieu de travail. Protégez toute telle matière qu’il est impossible de retirer de la zone de travail.
- Procurez une bonne aération de toutes les fumées inflammables ou explosives.
- Ne coupez pas et ne soudez pas les contenants ayant pu renfermer des matières combustibles.
- Prévoyez une veille d’incendie lors de tout travail dans une zone présentant des dangers d’incendie.
- Le gaz hydrogène peut se former ou s’accumuler sous les pièces de travail en aluminium lorsqu’elles sont coupées sous l’eau ou sur une table d’eau. NE PAS couper les alliages en aluminium sous l’eau ou sur une table d’eau à moins que le gaz hydrogène peut s’échapper ou se dissiper. Le gaz hydrogène accumulé explosera si enflammé.

**RAYONS D’ARC DE PLASMA**

Les rayons provenant de l’arc de plasma peuvent blesser vos yeux et brûler votre peau. Le procédé à l’arc de plasma produit une lumière infra-rouge et des rayons ultra-violets très forts. Ces rayons d’arc nuiront à vos yeux et brûleront votre peau si vous ne vous protégez pas correctement.

- Pour protéger vos yeux, portez toujours un casque ou un écran de soudeur. Portez toujours des lunettes de sécurité munies de parois latérales ou des lunettes de protection ou une autre sorte de protection oculaire.
- Portez des gants de soudeur et un vêtement protecteur approprié pour protéger votre peau contre les étincelles et les rayons de l’arc.
- Maintenez votre casque et vos lunettes de protection en bon état. Remplacez toute lentille sale ou comportant fissure ou rognure.
- Protégez les autres personnes se trouvant sur la zone de travail contre les rayons de l’arc en fournissant des cabines ou des écrans de protection.
- Utilisez la nuance de lentille qui est suggérée dans le recommendation qui suivent ANSI/ASC Z49.1:

<table>
<thead>
<tr>
<th>Courant Arc</th>
<th>Nuance Minimum Protective Numéro</th>
<th>Nuance Suggerée Numéro</th>
</tr>
</thead>
<tbody>
<tr>
<td>Moins de 300*</td>
<td>8</td>
<td>9</td>
</tr>
<tr>
<td>300 - 400*</td>
<td>9</td>
<td>12</td>
</tr>
<tr>
<td>400 - 800*</td>
<td>10</td>
<td>14</td>
</tr>
</tbody>
</table>

* Ces valeurs s’appliquent ou l’arc actuel est observé clairement. L’expérience a démontrer que les filtres moins foncés peuvent être utilisés quand l’arc est caché par moieceau de travail.

**BRUIT**

- Pour protéger votre ouïe contre les bruits forts, portez des tampons protecteurs et/ou des protections auriculaires. Protégez également les autres personnes se trouvant sur le lieu de travail.
- Il faut mesurer les niveaux sonores afin d’assurer que les décibels (le bruit) ne dépassent pas les niveaux sûrs.
- Pour des renseignements sur la manière de tester le bruit, consultez l’article 1, page 5.

1.06 Documents De Reference

1.07 Declaration of Conformity

Manufacturer: Thermal Dynamics Corporation
Address: 82 Benning Street
West Lebanon, New Hampshire 03784
USA

The equipment described in this manual conforms to all applicable aspects and regulations of the "EMC Directive" (European Council Directive 89/336/EEC) and to the National legislation for the enforcement of this Directive.

Serial numbers are unique with each individual piece of equipment and details description, parts used to manufacture a unit and date of manufacture.

National Standard and Technical Specifications

The product is designed and manufactured to a number of standards and technical requirements. Among them are:

* UL (Underwriters Laboratory) rating 94VO flammability testing for all printed-circuit boards used.

* For environments with increased hazard of electrical shock, Power Supplies bearing the [S] mark conform to EN50192 when used in conjunction with hand torches with exposed cutting tips, if equipped with properly installed standoff guides.

* Extensive product design verification is conducted at the manufacturing facility as part of the routine design and manufacturing process. This is to ensure the product is safe, when used according to instructions in this manual and related industry standards, and performs as specified. Rigorous testing is incorporated into the manufacturing process to ensure the manufactured product meets or exceeds all design specifications.

Thermal Dynamics has been manufacturing products for more than 30 years, and will continue to achieve excellence in our area of manufacture.

1.08 Statement of Warranty

LIMITED WARRANTY: Subject to the terms and conditions established below, Thermal Dynamics® Corporation warrants to the original retail purchaser that new Thermal Dynamics CUTMASTER™ plasma cutting systems sold after the effective date of this warranty are free of defects in material and workmanship. Should any failure to conform to this warranty appear within the applicable period stated below, Thermal Dynamics Corporation shall, upon notification thereof and substantiation that the product has been stored operated and maintained in accordance with Thermal Dynamics’ specifications, instructions, recommendations and recognized industry practice, correct such defects by suitable repair or replacement.

This warranty is exclusive and in lieu of any warranty of merchantability or fitness for a particular purpose.

Thermal Dynamics will repair or replace, at its discretion, any warranted parts or components that fail due to defects in material or workmanship within the time periods set out below. Thermal Dynamics Corporation must be notified within 30 days of any failure, at which time Thermal Dynamics Corporation will provide instructions on the warranty procedures to be implemented.

Thermal Dynamics Corporation will honor warranty claims submitted within the warranty periods listed below. All warranty periods begin on the date of sale of the product to the original retail customer or 1 year after sale to an authorized Thermal Dynamics Distributor.

This warranty does not apply to:
1. Consumable Parts, such as tips, electrodes, shield cups, o - rings, starter cartridges, gas distributors, fuses, filters.
2. Equipment that has been modified by an unauthorized party, improperly installed, improperly operated or misused based upon industry standards.

In the event of a claim under this warranty, the remedies shall be, at the discretion of Thermal Dynamics Corporation:

1. Repair of the defective product.
2. Replacement of the defective product.
3. Reimbursement of reasonable costs of repair when authorized in advance by Thermal Dynamics.
4. Payment of credit up to the purchase price less reasonable depreciation based on actual use.

These remedies may be authorized by Thermal Dynamics and are FOB West Lebanon, NH or an authorized Thermadyne service station. Product returned for service is at the owner’s expense and no reimbursement of travel or transportation is authorized.

LIMITATION OF LIABILITY: Thermal Dynamics Corporation shall not under any circumstances be liable for special or consequential damages such as, but not limited to, damage or loss of purchased or replacement goods or claims of customer of distributors (hereinafter “Purchaser”) for service interruption. The remedies of the Purchaser set forth herein are exclusive and the liability of Thermal Dynamics with respect to any contract, or anything done in connection therewith such as the performance or breach thereof, or from the manufacture, sale, delivery, resale, or sale of the goods covered by or furnished by Thermal Dynamics whether arising out of contract, negligence, strict tort, or under any warranty, or otherwise, shall not, except as expressly provided herein, exceed the price of the goods upon which liability is based.

This warranty becomes invalid if replacement parts or accessories are used which may impair the safety or performance of any Thermal Dynamics product.

This warranty is invalid if the Thermal Dynamics product is sold by non-authorized persons.

Effective September 4, 2007
SECTION 2 SYSTEM: INTRODUCTION

2.01 How To Use This Manual

This Owner’s Manual applies to just specification or part numbers listed on page i. To ensure safe operation, read the entire manual, including the chapter on safety instructions and warnings. Throughout this manual, the words WARNING, CAUTION, and NOTE may appear. Pay particular attention to the information provided under these headings. These special annotations are easily recognized as follows:

⚠️ WARNING
A WARNING gives information regarding possible personal injury.

⚠️ CAUTION
A CAUTION refers to possible equipment damage.

NOTE
A NOTE offers helpful information concerning certain operating procedures.

Additional copies of this manual may be purchased by contacting Thermadyne at the address and phone number in your area listed in the inside back cover of this manual. Include the Owner’s Manual number and equipment identification numbers. Electronic copies of this manual can also be downloaded at no charge in Acrobat PDF format by going to the Thermal Dynamics web site listed below and clicking on Thermal Dynamics and then on the Literature link: http://www.thermal-dynamics.com

2.02 Equipment Identification

The unit’s identification number (specification or part number), model, and serial number usually appear on a data tag attached to the rear panel. Equipment which does not have a data tag such as torch and cable assemblies are identified only by the specification or part number printed on loosely attached card or the shipping container. Record these numbers on the bottom of page 1 for future reference.

2.03 Receipt Of Equipment

When you receive the equipment, check it against the invoice to make sure it is complete and inspect the equipment for possible damage due to shipping. If there is any damage, notify the carrier immediately to file a claim. Furnish complete information concerning damage claims or shipping errors to the location in your area listed in the inside back cover of this manual. Include all equipment identification numbers as described above along with a full description of the parts in error. Move the equipment to the installation site before un-crating the unit. Use care to avoid damaging the equipment when using bars, hammers, etc., to un-crate the unit.

*NOTE: The duty cycle will be reduced if the primary input power (AC) is low or the output voltage (DC) is higher than shown in this chart.*

---

**NOTE**

IEC Rating is determined as specified by the International Electro-Technical Commission. These specifications include calculating an output voltage based upon power supply rated current. To facilitate comparison between power supplies, all manufacturers use this output voltage to determine duty cycle.

Line Voltages with Suggested Circuit Protection and Wire Sizes
Based on National Electric Code and Canadian Electric Code

**Note:** Currents are 60A, 140V Output

**NOTES**

Refer to Local and National Codes or local authority having jurisdiction for proper wiring requirements.

Cable size is de-rated based on the Duty Cycle of the equipment.

The suggested sizes are based on flexible power cable with power plug installations. For hard-wired installations refer to local or national codes.

An energy limiting fuse UL Class RK-1 (examples: BUSS LPS/LPN-RK or Gould-Shawmut AZK-A6K) should be used to minimize damage to Plasma Cutting, Welding or power distribution equipment.

NEVER use replaceable element fuses like UL Class H, or “one-time” fuses like UL Class K5.
2.06 Power Supply Features

- Handle and Leads Wrap
- Control Panel
- Torch Leads Receptacle
- Work Cable and Clamp
- Port for Optional Automation Interface Cable
- Input Power Selection
- Filter Assembly
- Gas Inlet Port
- Input Power Cord
SECTION 2 TORCH: INTRODUCTION

2T.01 Scope of Manual

This manual contains descriptions, operating instructions and maintenance procedures for the Torch Models SL60/Manual and SL100/Mechanized Plasma Cutting Torches. Service of this equipment is restricted to properly trained personnel; unqualified personnel are strictly cautioned against attempting repairs or adjustments not covered in this manual, at the risk of voiding the Warranty.

Read this manual thoroughly. A complete understanding of the characteristics and capabilities of this equipment will assure the dependable operation for which it was designed.

2T.02 General Description

Plasma torches are similar in design to the automotive spark plug. They consist of negative and positive sections separated by a center insulator. Inside the torch, the pilot arc starts in the gap between the negatively charged electrode and the positively charged tip. Once the pilot arc has ionized the plasma gas, the superheated column of gas flows through the small orifice in the torch tip, which is focused on the metal to be cut.

A single torch lead provides gas from a single source to be used as both the plasma and secondary gas. The air flow is divided inside the torch head. Single - gas operation provides a smaller sized torch and inexpensive operation.

NOTE
Refer to Section 2T.05, Introduction To Plasma, for a more detailed description of plasma torch operation.

Refer to the Appendix Pages for additional specifications as related to the Power Supply used.

2T.03 Specifications

A. Torch Configurations

1. Hand/Manual Torch, Models

The hand torch head is at 75° to the torch handle. The hand torches include a torch handle and torch trigger assembly.

2. Mechanized Torch, Model

The standard machine torch has a positioning tube with rack & pinch block assembly.

B. Torch Leads Lengths

Hand Torches are available as follows:
- 20 ft / 6.1 m, with ATC connectors
- 50 ft / 15.2 m, with ATC connectors

Machine Torches are available as follows:
- 5 foot / 1.5 m, with ATC connectors
- 10 foot / 3.05 m, with ATC connectors
- 25 foot / 7.6 m, with ATC connectors
- 50 foot / 15.2 m, with ATC connectors

C. Torch Parts

Starter Cartridge, Electrode, Tip, Shield Cup

D. Parts - In - Place (PIP)

Torch Head has built - in switch
12 vdc circuit rating

E. Type Cooling

Combination of ambient air and gas stream through torch.

⚠️ **WARNING**

*This torch is not to be used with oxygen (O₂).*

**NOTE**

*Operating pressure varies with torch model, operating amperage, and torch leads length. Refer to gas pressure settings charts for each model.*

H. Direct Contact Hazard

For standoff tip the recommended standoff is 3/16 inches / 4.7 mm.

2T.04 Options And Accessories

For options and accessories, see section 6.

2T.05 Introduction to Plasma

A. Plasma Gas Flow

Plasma is a gas which has been heated to an extremely high temperature and ionized so that it becomes electrically conductive. The plasma arc cutting and gouging processes use this plasma to transfer an electrical arc to the workpiece. The metal to be cut or removed is melted by the heat of the arc and then blown away.

While the goal of plasma arc cutting is separation of the material, plasma arc gouging is used to remove metals to a controlled depth and width.

In a Plasma Cutting Torch a cool gas enters Zone B, where a pilot arc between the electrode and the torch tip heats and ionizes the gas. The main cutting arc then transfers to the workpiece through the column of plasma gas in Zone C.

Typical Torch Head Detail

By forcing the plasma gas and electric arc through a small orifice, the torch delivers a high concentration of heat to a small area. The stiff, constricted plasma arc is shown in Zone C. Direct current (DC) straight polarity is used for plasma cutting, as shown in the illustration.

Zone A channels a secondary gas that cools the torch. This gas also assists the high velocity plasma gas in blowing the molten metal out of the cut allowing for a fast, slag-free cut.
B. Gas Distribution

The single gas used is internally split into plasma and secondary gases.

The plasma gas flows into the torch through the negative lead, through the starter cartridge, around the electrode, and out through the tip orifice.

The secondary gas flows down around the outside of the torch starter cartridge, and out between the tip and shield cup around the plasma arc.

C. Pilot Arc

When the torch is started a pilot arc is established between the electrode and cutting tip. This pilot arc creates a path for the main arc to transfer to the work.

D. Main Cutting Arc

DC power is also used for the main cutting arc. The negative output is connected to the torch electrode through the torch lead. The positive output is connected to the workpiece via the work cable and to the torch through a pilot wire.

E. Parts - In - Place (PIP)

The torch includes a 'Parts - In - Place' (PIP) circuit. When the shield cup is properly installed, it closes a switch. The torch will not operate if this switch is open.

Parts - In - Place Circuit Diagram for Hand Torch

![PIP Circuit Diagram for Hand Torch]

Parts - In - Place Circuit Diagram for Machine Torch

![PIP Circuit Diagram for Machine Torch]
SECTION 3 SYSTEM: INSTALLATION

3.01 Unpacking

1. Use the packing lists to identify and account for each item.
2. Inspect each item for possible shipping damage. If damage is evident, contact your distributor and/or shipping company before proceeding with the installation.
3. Record Power Supply and Torch model and serial numbers, purchase date and vendor name, in the information block at the front of this manual.

3.02 Lifting Options

The Power Supply includes a handle for hand lifting only. Be sure unit is lifted and transported safely and securely.

⚠️ WARNING

Do not touch live electrical parts.

Disconnect input power cord before moving unit.

FALLING EQUIPMENT can cause serious personal injury and can damage equipment.

HANDLE is not for mechanical lifting.

• Only persons of adequate physical strength should lift the unit.
• Lift unit by the handles, using two hands. Do not use straps for lifting.
• Use optional cart or similar device of adequate capacity to move unit.
• Place unit on a proper skid and secure in place before transporting with a fork lift or other vehicle.

3.03 Primary Input Power Connections

⚠️ CAUTION

Check your power source for correct voltage before plugging in or connecting the unit. Check the Voltage Selector at the rear of the unit for correct setting before plugging in or connecting the unit. The primary power source, fuse, and any extension cords used must conform to local electrical code and the recommended circuit protection and wiring requirements as specified in Section 2.

Most units are shipped from the factory with a 230Volt input power cable wired to the input contactor in the single-phase configuration. The following illustrations and directions are for changing that configuration to a different voltage and/or to three-phase operation or back again if a change had already been made.
A. Cover Removal

1. Remove the upper and lower screws which secure the cover to the main assembly. Do not loosen the lower screws inside the cut out slots in the bottom of the cover.

   **Note**
   The upper screws and lower screws are not the same. Do not mix them. The upper screws are for threading into the plastic of the front and rear panels. **DO NOT** use the finer threaded lower screws for this.

2. Carefully pull the Cover up and away from the unit.

B. Cover Installation

1. Reverse previous procedures for cover installation.

   **Note**
   When installing the upper screws, attempt to reuse the original threads. The easiest way to do this is by turning the screw counter-clockwise until you feel the threads line up, then begin to turn the screw clockwise to tighten. Do not over tighten.

C. Input Power Selection

Set the Input Voltage Selection Switch at the rear of the unit based on the primary input voltage it is connected to. Low is 208/230 VAC and high is 460 VAC.

D. Quick Guide to Phase Wiring

Single-Phase (1ø) and Jumper Settings

- L1
- L2
- L3
- L4
- Jumper L1-L4
- Jumper L2-L3
- GND

Three-Phase (3ø) and Jumper Settings

- L1
- L2
- L3
- L4
- Jumper L3-L3
- Jumper L1-L4
- Jumper L2-L3
- GND

**NOTE**
There is only one jumper setting that changes between the single and three phase settings. To change from single phase to three phase, the jumper connected to L2 needs to be removed and placed on the other L3 connection so both ends of the jumper are attached to the same electrical point. See previous illustrations.
E. Connections to Single Phase Input Power

**WARNING**

*Disconnect input power from the power supply and input cable before attempting this procedure.*

These instructions are for changing the input power and or cable on the 208/230, 400, 460 VAC Power Supply to Single - Phase input power.

1. Remove the Power Supply cover per instructions found in this subsection A.
2. Disconnect the original input power cable from the main input contactor and the chassis ground connection.
3. Loosen the through - hole protector on the back panel of the power supply. Pull the original power cable out of the power supply.
4. If the power cable being used is not the factory - supplied cable, use a three - conductor input power cable for the voltage desired and strip back the insulation on the individual wires.
5. Pass the cable being used through the access opening in the back panel of the power supply. Refer to Section 2 for power cable specifications.

**CAUTION**

*The primary power source and power cable must conform to local electrical code and the recommended circuit protection and wiring requirements (refer to table in Section 2).*

6. Connect the wires as follows.
   - Set Jumper wires on the contactor. See previous illustrations.
   - Green / Yellow wire to Ground.
   - Remaining wires to L1 and L2 input. It does not matter what order these wires are attached.
7. With a little slack in the wires, tighten the through - hole protector to secure the power cable.
8. Reinstall the Power Supply cover see subsection B.
9. Connect the opposite end of individual wires to a customer supplied plug or main disconnect.
10. Connect the input power cable (or close the main disconnect switch) to supply power.

F. Connections to Three Phase Input Power

**WARNING**

*Disconnect input power from the power supply and input cable before attempting this procedure.*

These instructions are for changing the input power and or cable on the 208/230, 400, 460 VAC Power Supply to Three - Phase input power.

1. Remove the Power Supply cover per instructions found in this subsection A.
2. Disconnect the original input power cable from the main input contactor and the chassis ground connection.
3. Loosen the through - hole protector on the back panel of the power supply. Pull the original power cable out of the power supply.
4. Using a customer supplied four - conductor input power cable for the voltage desired, strip back the insulation on the individual wires.
5. Pass the cable being used through the access opening in the back panel of the power supply. Refer to Section 2 for power cable specifications.

**CAUTION**

*The primary power source and power cable must conform to local electrical code and the recommended circuit protection and wiring requirements (refer to table in Section 2).*

6. Connect the wires as follows.
   - Set Jumper wires on the contactor. See illustration.
   - Green / Yellow wire to Ground.
   - Remaining wires to L1, L2 and L3 input. It does not matter what order these wires are attached. See the previous illustrations.
7. With a little slack in the wires, tighten the through-hole protector to secure the power cable.
8. Reinstall the Power Supply cover see sub-section B.
9. Connect the opposite end of individual wires to a customer supplied plug or main disconnect.
10. Connect the input power cable (or close the main disconnect switch) to supply power.

### 3.04 Gas Connections

#### Connecting Gas Supply to Unit

The connection is the same for compressed air or high pressure cylinders. Refer to the following subsections if an optional air line filter is to be installed.

1. Connect the air line to the inlet port. The illustration shows typical fittings as an example.

**NOTE**

For a secure seal, apply thread sealant to the fitting threads, according to manufacturer’s instructions. Do not use Teflon tape as a thread sealer, as small particles of the tape may break off and block the small air passages in the torch.

#### Installing Optional Single-Stage Air Filter

An optional filter kit is recommended for improved filtering with compressed air, to keep moisture and debris out of the torch.

1. Attach the Single-Stage Filter Hose to the Inlet Port.
2. Attach the Filter Assembly to the filter hose.
3. Connect the air line to the Filter. The illustration shows typical fittings as an example.

**NOTE**

For a secure seal, apply thread sealant to the fitting threads, according to the manufacturer’s instructions. Do not use Teflon tape as a thread sealer, as small particles of the tape may break off and block the small air passages in the torch. Connect as follows:

#### Using High Pressure Air Cylinders

When using high pressure air cylinders as the air supply:

1. Refer to the manufacturer’s specifications for installation and maintenance procedures for high pressure regulators.
2. Examine the cylinder valves to be sure they are clean and free of oil, grease or any foreign material. Briefly open each cylinder valve to blow out any dust which may be present.
3. The cylinder must be equipped with an adjustable high-pressure regulator capable of outlet pressures up to 100 psi (6.9 bar) maximum and flows of at least 300 scfh (141.5 lpm).

4. Connect supply hose to the cylinder.

NOTE

Pressure should be set at 100 psi (6.9 bar) at the high pressure cylinder regulator.

Supply hose must be at least 1/4 inch (6 mm) I.D.

For a secure seal, apply thread sealant to the fitting threads, according to manufacturer’s instructions. Do Not use Teflon tape as a thread sealer, as small particles of the tape may break off and block the small air passages in the torch.
SECTION 3 TORCH: INSTALLATION

3T.01 Torch Connections

If necessary, connect the torch to the Power Supply. Connect only the Thermal Dynamics model SL60 / Manual or SL100 / Mechanical Torch to this power supply. Maximum torch leads length is 100 feet / 30.5 m, including extensions.

WARNING
Disconnect primary power at the source before connecting the torch.

1. Align the ATC male connector (on the torch lead) with the female receptacle. Push the male connector into the female receptacle. The connectors should push together with a small amount of pressure.
2. Secure the connection by turning the locking nut clockwise until it clicks. DO NOT use the locking nut to pull the connection together. Do not use tools to secure the connection.

Check Air Quality

To test the quality of air:
1. Put the ON / OFF switch in the ON (up) position.
2. Put the Function Control switch in the SET position.
3. Place a welding filter lens in front of the torch and turn on the air. Do not start an arc!

Any oil or moisture in the air will be visible on the lens.

3T.02 Setting Up Mechanical Torch

NOTE
An adapter is required to be installed in the power supply if converting a hand torch system to operate a machine torch.

WARNING
Disconnect primary power at the source before disassembling the torch or torch leads.

The mechanical torch includes a positioning tube with rack and pinch block assembly.
1. Mount the torch assembly on the cutting table.
2. To obtain a clean vertical cut, use a square to align the torch perpendicular to the surface of the workpiece.

Connecting the Torch to the Power Supply
3. The system is ready for operation.
3. The proper torch parts (shield cup, tip, start cartridge, and electrode) must be installed for the type of operation. Refer to Section 4T.07, Torch Parts Selection for details.
SECTION 4 SYSTEM: OPERATION

4.01 Front Panel Controls / Features

See Illustration for numbering Identification

1. Output Current Control

Sets the desired output current. Output settings up to 60 Amps may be used for drag cutting (with the torch tip contacting the workpiece) or standoff cutting.

2. Function Control

Function Control Knob. Used to select between the different operating modes.

- **SET** Used to purge the air through the unit and torch and leads and to adjust gas pressure.
- **RUN** Used for general cutting operations
- **RAPID AUTO RESTART** Allows for faster restarting of the Pilot Arc for uninterrupted cutting.
- **LATCH** Used for longer hand held cuts. Once a cutting arc is established, the torch switch can be released. The cutting arc will remain on until the torch is lifted away from the work piece or if the torch leaves the edge of the work piece or if one of the system interlocks is activated.

3. On Off Power Switch

ON / OFF Switch controls input power to the power supply. Up is ON, down is OFF.

4. Air/Gas Pressure Control

The Pressure Control is used in the “SET” mode to adjust the air/gas pressure. Pull the knob out to adjust and push in to lock.

5. AC Indicator

Steady light indicates power supply is ready for operation. Blinking light indicates unit is in protective interlock mode. Shut unit off, shut off or disconnect input power, correct the fault, and restart the unit. Refer to Section 5 for details.

6. Temp Indicator

Indicator is normally OFF. Indicator is ON when internal temperature exceeds normal limits. Let the unit cool before continuing operation.

7. Gas Indicator

Indicator is ON when minimum input gas pressure for power supply operation is present. Minimum pressure for power supply operation is not sufficient for torch operation.

8. DC Indicator

Indicator is ON when DC output circuit is active.

9. Fault Error Indicator

Indicator is ON when Fault circuit is active. See section 5 for explanations of fault lights.

10. Pressure Indicators

The Indicators will illuminate according to the pressure set by the Pressure Control Knob (number 4).
4.02 Preparations for Operation

At the start of each operating session:

**WARNING**

Disconnect primary power at the source before assembling or disassembling power supply, torch parts, or torch and leads assemblies.

**Torch Parts Selection**

Check the torch for proper assembly and appropriate torch parts. The torch parts must correspond with the type of operation, and with the amperage output of this Power Supply (60amps maximum). Refer to Section 4T.07 and following for torch parts selection.

**Torch Connection**

Check that the torch is properly connected. Only Thermal Dynamics model SL60 / Manual or SL100 / Mechanical Torches may be connected to this Power Supply. See Section 3T of this manual.

**Check Primary Input Power Source**

1. Check the power source for proper input voltage. Make sure the input power source meets the power requirements for the unit per Section 2, Specifications.
2. Connect the input power cable (or close the main disconnect switch) to supply power to the system.

**Air Source**

Ensure source meets requirements (refer to Section 2). Check connections and turn air supply on.

**Connect Work Cable**

Clamp the work cable to the workpiece or cutting table. The area must be free from oil, paint and rust. Connect only to the main part of the workpiece; do not connect to the part to be cut off.

**Power On**

Place the Power Supply ON / OFF switch to the ON (up) position. AC indicator \( \sim \) turns on. Gas indicator \( \bigcirc \) turns on if there is sufficient gas pressure for power supply operation and the cooling fans turn on.

**NOTE**

Minimum pressure for power supply operation is lower than minimum for torch operation.

The cooling fans will turn on as soon as the unit is turned on. After the unit is idle for ten (10) minutes the fans will turn off. The fans will come back on as soon as the torch switch (Start Signal) is activated or if the unit is turned off, then turned on again. If an over temperature condition occurs, the fans will continue to run while the condition exists and for a ten (10) minute period once the condition is cleared.

**Set Operating Pressure**

1. Place the Power Supply Function Control knob to the SET position. Gas will flow.
2. For Standoff cutting, adjust gas pressure from 70 - 85 psi / 4.8 - 5.9 bar (LED's in center of control panel). Refer to the Standoff chart for pressure setting details.
### STANDOFF

<table>
<thead>
<tr>
<th>CutMaster 52 Gas Pressure Settings</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Leads Length</td>
<td>SL60 (Hand Torch)</td>
</tr>
<tr>
<td>Up to 25’ (7.6 m)</td>
<td>75 psi</td>
</tr>
<tr>
<td></td>
<td>5.2 bar</td>
</tr>
<tr>
<td>Each additional 25’ (7.6 m)</td>
<td>Add 5 psi</td>
</tr>
<tr>
<td></td>
<td>0.4 bar</td>
</tr>
</tbody>
</table>

3. For Drag cutting, adjust gas pressure from 75 - 95 psi / 5.2 - 6.5 bar (LED's in center of control panel). Refer to the Drag Cutting chart for pressure setting details.

### DRAG

<table>
<thead>
<tr>

<td>SL60 (Hand Torch)</td>
</tr>
<tr>
<td>Up to 25’ (7.6 m)</td>
<td>80 psi</td>
</tr>
<tr>
<td></td>
<td>5.5 bar</td>
</tr>
<tr>
<td>Each additional 25’ (7.6 m)</td>
<td>Add 5 psi</td>
</tr>
<tr>
<td></td>
<td>0.4 bar</td>
</tr>
</tbody>
</table>

### Typical Cutting Speeds

Cutting speeds vary according to torch output amperage, the type of material being cut, and operator skill. Refer to Section 4T.08 and following for greater details.

Output current setting or cutting speeds may be reduced to allow slower cutting when following a line, or using a template or cutting guide while still producing cuts of excellent quality.

### Postflow

Release the trigger to stop the cutting arc. Gas continues to flow for approximately 20 seconds. During post-flow, if the user moves the trigger release to the rear and presses the trigger, the pilot arc starts. The main arc transfers to the workpiece if the torch tip is within transfer distance to the workpiece.

### Shutdown

Turn the ON / OFF switch to OFF (down). All Power Supply indicators shut off. Unplug the input power cord or disconnect input power. Power is removed from the system.

### Select Current Output Level

1. Place the Function Control Knob in one of the three operating positions available:

   - **RUN**
   - **RAPID AUTO RESTART**
   - **LATCH**

   Gas flow stops.

2. Set the output current to desired amperage with the Output Current Control Knob.

### Cutting Operation

When the torch leaves the workpiece during cutting operations with the Function Control Knob in the RUN position, there is a brief delay in restarting the pilot arc. With the knob in the **RAPID AUTO RESTART** position, when the torch leaves the workpiece the pilot arc restarts instantly, and the cutting arc restarts instantly when the pilot arc contacts the workpiece. (Use the 'Rapid Auto Restart' position when cutting expanded metal or gratings, or in gouging or trimming operations when an uninterrupted restart is desired). And with the knob in the **LATCH** position the main cutting arc will be maintained after the torch switch is released.
This Page Intentionally Blank
SECTION 4 TORCH: OPERATION

4T.01 Torch Parts Selection

Depending on the type of operation to be done determines the torch parts to be used.

Type of operation:
   Drag cutting, standoff cutting or gouging

Torch parts:
   Shield Cup, Cutting Tip, Electrode and Starter Cartridge

NOTE

Refer to Section 4T.07 and following for additional information on torch parts.

Change the torch parts for a different operation as follows:

WARNING

Disconnect primary power at the source before assembling or disassembling torch parts, or torch and leads assemblies.

NOTE

The shield cup holds the tip and starter cartridge in place. Position the torch with the shield cup facing upward to keep these parts from falling out when the cup is removed.

1. Unscrew and remove the shield cup assembly from the torch head.

2. Remove the Electrode by pulling it straight out of the Torch Head.

3. Install the replacement Electrode by pushing it straight into the torch head until it clicks.

4. Install the starter cartridge and desired tip for the operation into the torch head.

5. Hand tighten the shield cup assembly until it is seated on the torch head. If resistance is felt when installing the cup, check the threads before proceeding.
**4T.02 Cut Quality**

*NOTES*

Cut quality depends heavily on setup and parameters such as torch standoff, alignment with the workpiece, cutting speed, gas pressures, and operator ability.

Cut quality requirements differ depending on application. For instance, nitride build-up and bevel angle may be major factors when the surface will be welded after cutting. Dross-free cutting is important when finish cut quality is desired to avoid a secondary cleaning operation. The following cut quality characteristics are illustrated in the following figure:

*Cut Quality Characteristics*

**Cut Surface**

The desired or specified condition (smooth or rough) of the face of the cut.

**Nitride Build-Up**

Nitride deposits can be left on the surface of the cut when nitrogen is present in the plasma gas stream. These buildups may create difficulties if the material is to be welded after the cutting process.

**Bevel Angle**

The angle between the surface of the cut edge and a plane perpendicular to the surface of the plate. A perfectly perpendicular cut would result in a 0° bevel angle.

**Top - Edge Rounding**

Rounding on the top edge of a cut due to wearing from the initial contact of the plasma arc on the workpiece.

**Bottom Dross Buildup**

Molten material which is not blown out of the cut area and resolidifies on the plate. Excessive dross may require secondary cleanup operations after cutting.

**Kerf Width**

The width of the cut (or the width of material removed during the cut).

**Top Spatter (Dross)**

Top spatter or dross on the top of the cut caused by slow travel speed, excess cutting height, or cutting tip whose orifice has become elongated.

**4T.03 General Cutting Information**

*WARNINGS*

Disconnect primary power at the source before disassembling the power supply, torch, or torch leads.

Frequently review the Important Safety Precautions at the front of this manual. Be sure the operator is equipped with proper gloves, clothing, eye and ear protection. Make sure no part of the operator’s body comes into contact with the workpiece while the torch is activated.

*CAUTION*

Sparks from the cutting process can cause damage to coated, painted, and other surfaces such as glass, plastic and metal.

*NOTE*

Handle torch leads with care and protect them from damage.

**Piloting**

Piloting is harder on parts life than actual cutting because the pilot arc is directed from the electrode to the tip rather than to a workpiece. Whenever possible, avoid excessive pilot arc time to improve parts life.
Torch Standoff

Improper standoff (the distance between the torch tip and workpiece) can adversely affect tip life as well as shield cup life. Standoff may also significantly affect the bevel angle. Reducing standoff will generally result in a more square cut.

Edge Starting

For edge starts, hold the torch perpendicular to the workpiece with the front of the tip near (not touching) the edge of the workpiece at the point where the cut is to start. When starting at the edge of the plate, do not pause at the edge and force the arc to "reach" for the edge of the metal. Establish the cutting arc as quickly as possible.

Direction of Cut

In the torches, the plasma gas stream swirls as it leaves the torch to maintain a smooth column of gas. This swirl effect results in one side of a cut being more square than the other. Viewed along the direction of travel, the right side of the cut is more square than the left.

Dross

When dross is present on carbon steel, it is commonly referred to as either "high speed, slow speed, or top dross". Dross present on top of the plate is normally caused by too great a torch to plate distance. "Top dross" is normally very easy to remove and can often be wiped off with a welding glove. "Slow speed dross" is normally present on the bottom edge of the plate. It can vary from a light to heavy bead, but does not adhere tightly to the cut edge, and can be easily scraped off. "High speed dross" usually forms a narrow bead along the bottom of the cut edge and is very difficult to remove. When cutting a troublesome steel, it is sometimes useful to reduce the cutting speed to produce "slow speed dross". Any resultant cleanup can be accomplished by scraping, not grinding.

4T.04 Hand Torch Operation

Standoff Cutting With Hand Torch

NOTE

For best performance and parts life, always use the correct parts for the type of operation.

1. The torch can be comfortably held in one hand or steadied with two hands. Position the hand to press the Trigger on the torch handle. With the hand torch, the hand may be positioned close to the torch head for maximum control or near the back end for maximum heat protection. Choose the holding technique that feels most comfortable and allows good control and movement.

NOTE

The tip should never come in contact with the workpiece except during drag cutting operations.
2. Depending on the cutting operation, do one of the following:
   a. For **edge starts**, hold the torch perpendicular to the workpiece with the front of the tip on the edge of the workpiece at the point where the cut is to start.
   b. For **standoff cutting**, hold the torch 1/8 - 3/8 in (3-9 mm) from the workpiece as shown below.

   ![Diagram of standoff cutting](image)

   **Standoff Distance**

3. Hold the torch away from your body.
4. Slide the trigger release toward the back of the torch handle while simultaneously squeezing the trigger. The pilot arc will start.

   ![Diagram of trigger release](image)

5. Bring the torch within transfer distance to the work. The main arc will transfer to the work, and the pilot arc will shut off.

   ![Diagram of main arc transfer](image)

   **NOTE**

   The gas preflow and postflow are a characteristic of the power supply and not a function of the torch.

6. Cut as usual. Simply release the trigger assembly to stop cutting.
7. Follow normal recommended cutting practices as provided in the power supply operator's manual.

   **NOTE**

   When the shield cup is properly installed, there is a slight gap between the shield cup and the torch handle. Gas vents through this gap as part of normal operation. Do not attempt to force the shield cup to close this gap. Forcing the shield cup against the torch head or torch handle can damage components.

8. For a consistent standoff height from the workpiece, install the standoff guide by sliding it onto the torch shield cup. Install the guide with the legs at the sides of the shield cup body to maintain good visibility of the cutting arc. During operation, position the legs of the standoff guide against the workpiece.
**Shield Cup With Straight Edge**

The drag shield cup can be used with a non-conductive straight edge to make straight cuts by hand.

**WARNING**

*The straight edge must be non-conductive.*

The drag shield cup can be used with a non-conductive straight edge to make straight cuts by hand.

**Non-Conductive Straight Edge Cutting Guide**

A-03539

Using Drag Shield Cup With Straight Edge

The drag shield cup can be used with a non-conductive straight edge to make straight cuts by hand.

**WARNING**

*The straight edge must be non-conductive.*

**Drag Cutting With a Hand Torch**

Drag cutting works best on metal 3/16" (4.7 mm) thick or less.

**NOTE**

*For best parts performance and life, always use the correct parts for the type of operation.*

1. Install the drag cutting tip and set the output current.
2. The torch can be comfortably held in one hand or steadied with two hands. Position the hand to press the Trigger on the torch handle. With the hand torch, the hand may be positioned close to the torch head for maximum control or near the back end for maximum heat protection. Choose the holding technique that feels most comfortable and allows good control and movement.
3. Keep the torch in contact with the workpiece during the cutting cycle.
4. Hold the torch away from your body.
5. Slide the trigger release toward the back of the torch handle while simultaneously squeezing the trigger. The pilot arc will start.
6. Bring the torch within transfer distance to the work. The main arc will transfer to the work, and the pilot arc will shut off.
7. Cut as usual. Simply release the trigger assembly to stop cutting.
8. Follow normal recommended cutting practices as provided in the power supply operator's manual.

**NOTE**

*When the shield cup is properly installed, there is a slight gap between the shield cup and the torch handle. Gas vents through this gap as part of normal operation. Do not attempt to force the shield cup to close this gap. Forcing the shield cup against the torch head or torch handle can damage components.*
Piercing With Hand Torch

1. The torch can be comfortably held in one hand or steadied with two hands. Position the hand to press the Trigger on the torch handle. With the hand torch, the hand may be positioned close to the torch head for maximum control or near the back end for maximum heat protection. Choose the technique that feels most comfortable and allows good control and movement.

   **NOTE**

   The tip should never come in contact with the workpiece except during drag cutting operations.

2. Angle the torch slightly to direct blowback particles away from the torch tip (and operator) rather than directly back into it until the pierce is complete.

3. In a portion of the unwanted metal start the pierce off the cutting line and then continue the cut onto the line. Hold the torch perpendicular to the workpiece after the pierce is complete.

4. Hold the torch away from your body.

5. Slide the trigger release toward the back of the torch handle while simultaneously squeezing the trigger. The pilot arc will start.

6. Bring the torch within transfer distance to the work. The main arc will transfer to the work, and the pilot arc will shut off.

   **NOTES**

   The gas preflow and postflow are a characteristic of the power supply and not a function of the torch.

   When the shield cup is properly installed, there is a slight gap between the shield cup and the torch handle. Gas vents through this gap as part of normal operation. Do not attempt to force the shield cup to close this gap. Forcing the shield cup against the torch head or torch handle can damage components.

7. Clean spatter and scale from the shield cup and the tip as soon as possible. Spraying the shield cup in anti-spatter compound will minimize the amount of scale which adheres to it.

Cutting speed depends on material, thickness, and the operator’s ability to accurately follow the desired cut line. The following factors may have an impact on system performance:

- Torch parts wear
- Air quality
- Line voltage fluctuations
- Torch standoff height
- Proper work cable connection
4T.05 Gouging

**WARNINGS**

Be sure the operator is equipped with proper gloves, clothing, eye and ear protection and that all safety precautions at the front of this manual have been followed. Make sure no part of the operator’s body comes in contact with the workpiece when the torch is activated.

Disconnect primary power to the system before disassembling the torch, leads, or power supply.

**CAUTION**

Sparks from plasma gouging can cause damage to coated, painted or other surfaces such as glass, plastic, and metal.

Check torch parts. The torch parts must correspond with the type of operation. Refer to Section 4T.07, Torch Parts Selection.

**Gouging Parameters**

Gouging performance depends on parameters such as torch travel speed, current level, lead angle (the angle between the torch and workpiece), and the distance between the torch tip and workpiece (standoff).

**CAUTION**

Touching the torch tip or shield cup to the work surface will cause excessive parts wear.

**Torch Travel Speed**

*NOTE*

Refer to Appendix Pages for additional information as related to the Power Supply used.

Optimum torch travel speed is dependent on current setting, lead angle, and mode of operation (hand or machine torch).

**Current Setting**

Current settings depend on torch travel speed, mode of operation (hand or machine torch), and the amount of material to be removed.

---

**Lead Angle**

The angle between the torch and workpiece depends on the output current setting and torch travel speed. The recommended lead angle is 35°. At a lead angle greater than 45° the molten metal will not be blown out of the gouge and may be blown back onto the torch. If the lead angle is too small (less than 35°), less material may be removed, requiring more passes. In some applications, such as removing welds or working with light metal, this may be desirable.

**Standoff Distance**

The tip to work distance affects gouge quality and depth. Standoff distance of 1/8 - 1/4 inch (3 - 6 mm) allows for smooth, consistent metal removal. Smaller standoff distances may result in a severance cut rather than a gouge. Standoff distances greater than 1/4 inch (6 mm) may result in minimal metal removal or loss of transferred main arc.

**Slag Buildup**

Slag generated by gouging on materials such as carbon and stainless steels, nickels, and alloyed steels, can be removed easily in most cases. Slag does not obstruct the gouging process if it accumulates to the side of the gouge path. However, slag build - up can cause inconsistencies and irregular metal removal if large amounts of material build up in front of the arc. The build - up is most often a result of improper travel speed, lead angle, or standoff height.
**4T.06 Mechanized Torch Operation**

**Cutting With Mechanized Torch**

The mechanized torch can be activated by remote control pendant or by a remote interface device such as CNC.

1. To start a cut at the plate edge, position the center of the torch along the edge of the plate.

**Travel Speed**

Proper travel speed is indicated by the trail of the arc which is seen below the plate. The arc can be one of the following:

1. **Straight Arc**  
   A straight arc is perpendicular to the workpiece surface. This arc is generally recommended for the best cut using air plasma on stainless or aluminum.

2. **Leading Arc**  
   The leading arc is directed in the same direction as torch travel. A five degree leading arc is generally recommended for air plasma on mild steel.

3. **Trailing Arc**  
   The trailing arc is directed in the opposite direction as torch travel.

For optimum smooth surface quality, the travel speed should be adjusted so that only the leading edge of the arc column produces the cut. If the travel speed is too slow, a rough cut will be produced as the arc moves from side to side in search of metal for transfer.

Travel speed also affects the bevel angle of a cut. When cutting in a circle or around a corner, slowing down the travel speed will result in a squarer cut. The power source output should be reduced also. Refer to the appropriate Control Module Operating Manual for any Corner Slowdown adjustments that may be required.

**Piercing With Machine Torch**

To pierce with a machine torch, the arc should be started with the torch positioned as high as possible above the plate while allowing the arc to transfer and pierce. This standoff helps avoid having molten metal blow back onto the front end of the torch.

When operating with a cutting machine, a pierce or dwell time is required. Torch travel should not be enabled until the arc penetrates the bottom of the plate. As motion begins, torch standoff should be reduced to the recommended 1/8 - 1/4 inch (3-6 mm) distance for optimum speed and cut quality. Clean spatter and scale from the shield cup and the tip as soon as possible. Spraying or dipping the shield cup in anti-spatter compound will minimize the amount of scale which adheres to it.
4T.07 Parts Selection for Manual and Mechanized Torch Cutting

**Drag Tip Cutting**
- Tips: 20A 9-8205, 30A 9-8206, 40A 9-8207, 60A 9-8252

#### NOTES

* Gas pressure shown is for torches with leads up to 25’/7.6 m long. For 50’/15.2 m leads, set gas pressure to 70 psi/4.8 bar.

** Total flow rate includes plasma and secondary gas flow.
# PATENT INFORMATION

## Plasma Cutting Torch Patents

The following parts are covered under U.S. and Foreign Patents as follows:

5.01 General Maintenance

**Warning!**
**Disconnect input power before maintaining.**

<table>
<thead>
<tr>
<th>Frequency</th>
<th>Task Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each Use</td>
<td>Visual check of torch tip and electrode</td>
</tr>
<tr>
<td>Weekly</td>
<td>Visually inspect the torch body tip, electrode and shield cup</td>
</tr>
<tr>
<td></td>
<td>Visually inspect the cables and leads. Replace as needed</td>
</tr>
<tr>
<td>3 Months</td>
<td>Replace all broken parts</td>
</tr>
<tr>
<td></td>
<td>Clean exterior of power supply</td>
</tr>
<tr>
<td>6 Months</td>
<td>Visually check and Carefully clean the interior</td>
</tr>
</tbody>
</table>

Maintain more often if used under severe conditions.
5.02 Maintenance Schedule

NOTE

The actual frequency of maintenance may need to be adjusted according to the operating environment.

Daily Operational Checks or Every Six Cutting Hours:

1. Check torch consumable parts, replace if damaged, worn or when cut performance has diminished.
2. Check plasma and secondary supply and pressure.
3. Purge plasma gas line to remove any moisture build-up.

Weekly or Every 30 Cutting Hours:

1. Check fan for proper operation and adequate air flow.
2. Inspect torch for any cracks or exposed wires, replace if necessary.
3. Inspect input power cable for damage or exposed wires, replace if necessary.

Six Months or Every 720 Cutting Hours:

1. Check the in-line air filter(s), clean or replace as required
2. Check cables and hoses for leaks or cracks, replace if necessary.
3. Check all contactor points for severe arcing or pits, replace if necessary.
4. Vacuum dust and dirt out of the entire machine.

CAUTION

Do not blow air into the power supply during cleaning. Blowing air into the unit can cause metal particles to interfere with sensitive electrical components and cause damage to the unit.

5.03 Common Faults

<table>
<thead>
<tr>
<th>Problem - Symptom</th>
<th>Common Cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insufficient Penetration</td>
<td>1. Cutting speed too fast.</td>
</tr>
<tr>
<td></td>
<td>2. Torch tilted too much.</td>
</tr>
<tr>
<td></td>
<td>3. Metal too thick.</td>
</tr>
<tr>
<td></td>
<td>4. Worn torch parts</td>
</tr>
<tr>
<td></td>
<td>5. Cutting current too low.</td>
</tr>
<tr>
<td></td>
<td>6. Non - Genuine Thermal Dynamics parts used</td>
</tr>
<tr>
<td></td>
<td>7. Incorrect gas pressure</td>
</tr>
<tr>
<td>Main Arc Extinguishes</td>
<td>1. Cutting speed too slow.</td>
</tr>
<tr>
<td></td>
<td>2. Torch standoff too high from workpiece.</td>
</tr>
<tr>
<td></td>
<td>3. Cutting current too high.</td>
</tr>
<tr>
<td></td>
<td>4. Work cable disconnected.</td>
</tr>
<tr>
<td></td>
<td>5. Worn torch parts</td>
</tr>
<tr>
<td></td>
<td>6. Non - Genuine Thermal Dynamics parts used</td>
</tr>
<tr>
<td>Excessive Dross Formation</td>
<td>1. Cutting speed too slow.</td>
</tr>
<tr>
<td></td>
<td>2. Torch standoff too high from workpiece.</td>
</tr>
<tr>
<td></td>
<td>3. Cutting current too high.</td>
</tr>
<tr>
<td></td>
<td>4. Improper cutting current.</td>
</tr>
<tr>
<td></td>
<td>5. Worn torch parts</td>
</tr>
<tr>
<td></td>
<td>6. Non - Genuine Thermal Dynamics parts used</td>
</tr>
<tr>
<td>Short Torch Parts Life</td>
<td>1. Oil or moisture in air source.</td>
</tr>
<tr>
<td></td>
<td>2. Exceeding system capability (material too thick).</td>
</tr>
<tr>
<td></td>

</tr>
<tr>
<td></td>
<td>4. Gas pressure too low.</td>
</tr>
<tr>
<td></td>
<td>5. Improperly assembled torch</td>
</tr>
<tr>
<td></td>
<td>6. Non - Genuine Thermal Dynamics parts used</td>
</tr>
<tr>
<td>Difficult Starting</td>
<td>1. Worn torch parts</td>
</tr>
<tr>
<td></td>
<td>2. Non - Genuine Thermal Dynamics parts used</td>
</tr>
<tr>
<td></td>
<td>3. Incorrect gas pressure</td>
</tr>
</tbody>
</table>
5.04 Fault Indicator

At initial power up, two lights will temporarily illuminate for 2-3 seconds to show the version of software used.

To determine the first digit, count the function indicators left to right, 1 through 5. To determine the second digit count the pressure indicators, reading from bottom to top, 0 through 7. In the example below the Temp indicator and 76 psi indicators are on indicating the version would be 2.3.

When the Fault indicator is on or blinking it will be accompanied by one of the pressure indicator lights depending on what the Fault is. Only one of these faults will be displayed at one time. If more than one fault exists, when the first fault is corrected and cleared, the next fault will then be displayed. It is possible to have a fault indicated in the function indicators and another fault indicated in the pressure indicators. The following table shows each of the Faults possible.

<table>
<thead>
<tr>
<th>Pressure Indicator</th>
<th>Fault</th>
</tr>
</thead>
<tbody>
<tr>
<td>Max</td>
<td>Over Pressure</td>
</tr>
<tr>
<td>90</td>
<td>Internal Error</td>
</tr>
<tr>
<td>85</td>
<td>Shorted Torch</td>
</tr>
<tr>
<td>80</td>
<td>Consumables Missing</td>
</tr>
<tr>
<td>75</td>
<td>Start Error</td>
</tr>
<tr>
<td>70</td>
<td>Parts in Place</td>
</tr>
<tr>
<td>65</td>
<td>Input Power</td>
</tr>
<tr>
<td>Min</td>
<td>Under Pressure</td>
</tr>
</tbody>
</table>

Fault explanations are covered in the following tables.

Explanation of Faults

"UNDER PRESSURE: Indicates that operating pressure is set too low and power supply output power will be disabled.

INPUT POWER: Indicates primary line voltage is outside the operating limits of the power supply as selected by the setting of INPUT VOLTAGE SELECTION SWITCH at the rear of the unit. Low is 208/230 VAC and high is 460 VAC.

PART IN PLACE: Indicates that the shield cup is not properly installed or tightened.

START ERROR: Indicates that the START SIGNAL was active (ie. Torch Trigger depressed, hand held pendant switch on or CNC signal for torch on) during one of three conditions:

1) During initial power up when ON/OFF switch is turned to ON position
2) When fault which had been disabling the system is cleared.
3) When the FUNCTION CONTROL SWITCH Mode is moved from SET position to any of the other three (3) modes of operation.

CONSUMABLES MISSING: Indicates that the electrode, start cartridge or tip is missing or excessively worn.

SHORTED TORCH: Indicates the torch or lead has a shorted condition between positive and negative leads.

INTERNAL ERROR: Indicates a microprocessor error.

OVER PRESSURE: Indicates that operating pressure is set too high. The Error Indicator will not flash when the pressure is above 95 PSI. This LED will remain on and the system will operate but pilot starting and cut performance may be affected.

The cooling fans will turn on as soon as the unit is turned on. After the unit is idle for ten (10) minutes the fans will turn off. The fans will come back on as soon as the torch switch (Start Signal) is activated or if the unit is turned off, then turned on again. If an over temperature condition occurs, the fans will continue to run while the condition exists and for a ten (10) minute period once the condition is cleared.
## 5.05 Basic Troubleshooting Guide

### WARNING

There are extremely dangerous voltage and power levels present inside this unit. Do not attempt to diagnose or repair unless you have had training in power electronics measurement and troubleshooting techniques.

<table>
<thead>
<tr>
<th>Problem - Symptom</th>
<th>Possible Cause</th>
<th>Recommended Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ON / OFF Switch is on but the A/C Indicator does not light</strong></td>
<td>1. Primary power disconnect is in OFF position. 2. Primary fuses / breakers are blown or tripped. 3. Faulty components in unit.</td>
<td>1. Turn primary power disconnect switch to ON position. 2. a) Have qualified person check primary fuses / breakers. b) Connect unit to known good primary power receptacle. 3. Return to authorized service center for repair or replacement.</td>
</tr>
<tr>
<td><strong>FAULT indicator flashing, 65 PSI indicator flashing</strong></td>
<td>1. INPUT VOLTAGE SELECTION SWITCH set for incorrect voltage. 2. Primary input voltage problem. 3. Faulty components in unit.</td>
<td>1. Turn off power to unit then set INPUT VOLTAGE SELECTION SWITCH to match primary input voltage. 2. Have qualified person check primary voltage to insure it meets unit requirements see section 2.04. 3. Return to authorized service center for repair or replacement.</td>
</tr>
<tr>
<td><strong>TEMPERATURE indicator on. FAULT indicator flashing.</strong></td>
<td>1. Air flow through or around the unit is obstructed. 2. Duty cycle of the unit has been exceeded 3. Failed components in unit.</td>
<td>1. Refer to clearance information – section 2.04 2. Allow unit to cool. 3. Return to authorized service center for repair or replacement.</td>
</tr>

</tbody>
</table>
5.06 Circuit Fault Isolation

**WARNING**

The following procedures should not be attempted by anyone who has not had proper training or authorized to do so.

**A. Cover Removal**

1. Remove the upper and lower screws which secure the cover to the main assembly. Do not loosen the lower screws inside the cut out slots in the bottom of the cover.

   **Note**

   The upper screws and lower screws are not the same. Do not mix them. The upper screws are for threading into the plastic of the front and rear panels. **Do NOT** use the finer threaded lower screws for this.

2. Carefully pull the Cover up and away from the unit.

**B. Cover Installation**

1. Reverse previous procedures for cover installation.

   **NOTE**

   When installing the upper screws, attempt to reuse the original threads. The easiest way to do this is by turning the screw counter-clockwise until you feel the threads line up, then begin to turn the screw clockwise to tighten to 15-18 in. lbs.. **Do not over tighten.**

**C. Filter Element Assembly Replacement**

The Filter Element Assembly is in the rear panel. For better system performance, the filter element should be checked per the Maintenance Schedule (Subsection 5.02), and either cleaned or replaced.

1. Remove power from the power supply; turn off the gas supply and bleed down the system.

2. Remove the system cover. See "A Cover Removal" in this section.

3. Locate the internal air line and the fitting from the filter assembly. Number 1 in the following illustration.

4. Hold a wrench or similar tool against the locking ring on the filter assembly fitting, then pull on the hose to release it. (Numbers 2 and 3 in the following illustration).
5. Remove the fitting from the filter element assembly by inserting a 6 mm hex wrench into the internal hex fitting and turning it counterclockwise (left). Numbers 4 and 5 in the previous illustration.

6. Disconnect the input line from the filter element assembly.

7. Remove the filter element assembly through the rear opening.

**NOTE**

*If replacing or cleaning just the filter element refer to the following illustration for disassembly.*

8. Install the new or cleaned assembly by reversing these procedures.

9. Turn on the air supply and check for leaks before reinstalling the cover.
Optional Single-Stage Filter Element Replacement

These instructions apply to power supplies where the optional Single-Stage Filter has been installed.

The Power Supply shuts down automatically when the Filter Element becomes completely saturated. The Filter Element can be removed from its housing, dried, and reused. Allow 24 hours for Element to dry. Refer to Section 6, Parts List, for replacement filter element catalog number.

1. Remove power from power supply.
2. Shut off air supply and bleed down system before disassembling Filter to change Filter Element.
3. Disconnect gas supply hose.
4. Turn the Filter Housing Cover counter-clockwise and remove it. The Filter Element is located inside the Housing.
5. Remove the Filter Element from the Housing and set Element aside to dry.
6. Wipe inside of housing clean, then insert the replacement Filter Element open side first.
7. Replace Housing on Cover.
8. Reattach gas supply.

**NOTE**

*If unit leaks between housing and cover, inspect the “O” Ring for cuts or other damage.*

This completes the parts replacement procedures.
SECTION 5 TORCH: SERVICE

5T.01 General Maintenance

**NOTE**

Refer to Previous "Section 5 System" for common and fault indicator descriptions.

**Cleaning Torch**

Even if precautions are taken to use only clean air with a torch, eventually the inside of the torch becomes coated with residue. This buildup can affect the pilot arc initiation and the overall cut quality of the torch.

**WARNINGS**

Disconnect primary power to the system before disassembling the torch or torch leads.

DO NOT touch any internal torch parts while the AC indicator light of the Power Supply is ON.

The inside of the torch should be cleaned with electrical contact cleaner using a cotton swab or soft wet rag. In severe cases, the torch can be removed from the leads and cleaned more thoroughly by pouring electrical contact cleaner into the torch and blowing it through with compressed air.

**CAUTION**

Dry the torch thoroughly before reinstalling.

**O-Ring Lubrication**

An o-ring on the Torch Head and ATC Male Connector requires lubrication on a scheduled basis. This will allow the o-rings to remain pliable and provide a proper seal. The o-rings will dry out, becoming hard and cracked if the lubricant is not used on a regular basis. This can lead to potential performance problems.

It is recommended to apply a very light film of o-ring lubricant (Catalog # 8-4025) to the o-rings on a weekly basis.

**NOTE**

DO NOT use other lubricants or grease, they may not be designed to operate within high temperatures or may contain “unknown elements” that may react with the atmosphere. This reaction can leave contaminants inside the torch. Either of these conditions can lead to inconsistent performance or poor parts life.
5T.02 Inspection and Replacement of Consumable Torch Parts

**WARNINGS**

Disconnect primary power to the system before disassembling the torch or torch leads.

DO NOT touch any internal torch parts while the AC indicator light of the Power Supply is ON.

Remove the consumable torch parts as follows:

**NOTE**

The shield cup holds the tip and starter cartridge in place. Position the torch with the shield cup facing upward to prevent these parts from falling out when the cup is removed.

1. Unscrew and remove the shield cup from the torch.

**NOTE**

Slag built up on the shield cup that cannot be removed may effect the performance of the system.

2. Inspect the cup for damage. Wipe it clean or replace if damaged.

3. On torches with a shield cup body and a shield cap or deflector, ensure that the cap or deflector is threaded snugly against the shield cup body. In shielded drag cutting operations (only), there may be an O-ring between the shield cup body and drag shield cap. Do not lubricate the O-ring.

4. Remove the tip. Check for excessive wear (indicated by an elongated or oversized orifice). Clean or replace the tip if necessary.

![Good Tip](A-03406)

![Worn Tip](A-03406)

**Example of Tip Wear**

5. Remove the starter cartridge. Check for excessive wear, plugged gas holes, or discoloration. Check the lower end fitting for free motion. Replace if necessary.

![Spring-Loaded Lower End Fitting](A-08064)

![Spring-Loaded Lower End Fitting at Rest / Full Extension](A-08064)

6. Pull the Electrode straight out of the Torch Head. Check the face of the electrode for excessive wear. Refer to the following figure.

![New Electrode](A-03284)

![Worn Electrode](A-03284)

**Electrode Wear**

7. Reinstall the Electrode by pushing it straight into the torch head until it clicks.

8. Reinstall the desired starter cartridge and tip into the torch head.

9. Hand tighten the shield cup until it is seated on the torch head. If resistance is felt when installing the cup, check the threads before proceeding.

This completes the parts replacement procedures.
6.01 Introduction

A. Parts List Breakdown

The parts list provide a breakdown of all replaceable components. The parts lists are arranged as follows:

- Section 6.03 Complete Power Supply Replacement
- Section 6.04 Replacement Parts
- Section 6.05 Options and Accessories
- Section 6.06 Replacement Parts for Hand Torch
- Section 6.07 Replacement Parts for Machine Torches and Unshielded Leads
- Section 6.08 Replacement Shielded Machine Torch Leads Assemblies.
- Section 6.09 Torch Consumables Parts for SL60
- Section 6.10 Torch Consumables Parts for SL100

NOTE

Parts listed without item numbers are not shown, but may be ordered by the catalog number shown.

B. Returns

If a product must be returned for service, contact your distributor. Materials returned without proper authorization will not be accepted.

6.02 Ordering Information

Order replacement parts by catalog number and complete description of the part or assembly, as listed in the parts list for each type item. Also include the model and serial number of the power supply. Address all inquiries to your authorized distributor.

6.03 Power Supply Replacement

The following items are included with the replacement power supply: work cable & clamp, input power cable, gas pressure regulator / filter, and operating manual.

- Standoff Guide 9-8251

**STANDOFF CUTTING**

- Shield Cup 9-8218
- O-Ring No. 8-3488
- Shield Cap, Deflector 9-8243

**50-60A CUTTING**

- Tips:
  - 50-55A 9-8209
  - 60A 9-8210

- Shield Cup 9-8218
- Shield Cap, Drag 50-60A 9-8235
- Standoff Guide 9-8281

**70-120A CUTTING**

- Tips:
  - 70A 9-8231
  - 80A 9-8211
  - 90/100A 9-8212
  - 120A 9-8253

- Shield Cup 9-8218
- Shield Cap, Deflector 9-8243
- Standoff Guide 9-8281

**STANDOFF CUTTING**

- Shield Cup 9-8218
- O-Ring No. 8-3488
- Shield Cap, Drag 70-100A 9-8236

**40-120A GOUING**

- Tip Gouging A 9-8225 (40 Amps Max.)
- Tip Gouging B 9-8226 (50 - 100 Amps)
- Tip Gouging C 9-8227 (60 - 120 Amps)
- Tip Gouging D 9-8228 (60 - 120 Amps)

**NOTE**

CutMaster 52 uses 60A and less
CutMaster 82 uses 80A and less
CutMaster 102 uses 100A and less
CutMaster 152 uses 120A and less
APPENDIX 1: SEQUENCE OF OPERATION
(BLOCK DIAGRAM)

**ACTION:**
Close external disconnect switch.

**RESULT:**
Power to system.

**ACTION:**
ON / OFF switch to ON

**RESULT:**
AC indicator ON.
Fan(s) ON.
GAS indicator ON when input pressure is adequate for power supply operation.
Power circuit ready.

**ACTION:**
UNPLUG INPUT POWER CORD OR OPEN EXTERNAL DISCONNECT.

**RESULT:**
No power to system.

**ACTION:**
RUN / Rapid Auto Restart / SET / LATCH switch to RUN
(for most applications) or to Rapid Auto Restart
(for gouging, trimming, or expanded metal applications) or to LATCH is used for specific applications (torch switch can be released after main arc transfer).

**RESULT:**
Gas flow stops.

**ACTION:**
Connect work cable to workpiece.
Set output amperage.

**RESULT:**
System is ready for operation.

**ACTION:**
Protect eyes and activate torch.

**RESULT:**
Gas flows briefly, then stops. Gas restarts.
DC indicator--- ON
Pilot arc established.

**ACTION:**
Release torch trigger.

**RESULT:**
Main arc stops. Gas flow stops after post - flow.

**ACTION:**
ON / OFF switch to OFF

**RESULT:**
All indicators off. Power supply fan(s) shuts off.

**ACTION:**
RUN / Rapid Auto Restart / SET / LATCH switch to RUN

**RESULT:**
Gas flows to set pressure.

**ACTION:**
Torch moved away from work (while still activated).

**RESULT:**
Main arc stops. Pilot arc automatically restarts.

**ACTION:**
Torch moved within transfer distance of workpiece.

**RESULT:**
Main arc transfers. Pilot arc off.

**ACTION:**
Close external disconnect switch.

## NOTES:

1. Symbol shown indicates single- or three-phase AC input, static frequency converter-transformer-rectifier, DC output.
2. Indicates input voltages for this power supply. Most power supplies carry a label at the input power cord showing input voltage requirements for the power supply as built.
3. Top row: Duty cycle values.
   - IEC duty cycle value is calculated as specified by the International Electrotechnical Commission.
   - TDC duty cycle value is determined under the power supply manufacturer's test procedures.
4. Sections of the Data Tag may be applied to separate areas of the power supply.
