S-74 MPa Plus

10-foot, 14-pin interconnecting cord for connecting to any Miller 14-pin power source.

Trigger receptacle oriented in a downward position to reduce potential damage.

Trigger hold reduces operator fatigue by allowing the operator to make long welds without having to energize the trigger continuously.

Dual-wire feeders allow two different wire types to be available on one feeder, avoiding downtime from changing spools and drive rolls.

For MPa Plus feeders only! **XR-Aluma-Pro™ Plus and XR™-Pistol Plus push-pull guns for aluminum.** Comes in 15- and 25-foot lengths for extended reach with trouble-free, reliable feeding. Gun is available in either air- or water-cooled versions.

Posifeed™ wire drive assembly features

- **24 VDC high-torque, permanent-magnet motor**.
- **Quick-change drive rolls**.
- **Quick-release, calibrated drive-roll pressure adjustment arm** allows drive roll change without losing spring preload setting.
- **Four sealed ball bearing all-gear-driven drive-roll carriers** for smooth, positive and accurate wire feed with long uninterrupted service life.
- **Easy loading and threading of welding wire** without having to release the drive-roll pressure arm.
- **Solid-state speed control and brake circuit** eliminates the need for electrical/mechanical relays and increases service life.
- **Uses Miller standard 1-5/8 inch (41 mm) diameter drive rolls**.
- **Quick-connect for all Miller guns**.
- **Covered drive rolls** — easy access, heavy-duty, molded composite cover over drive assembly.
- **Floating positive drive systems** provide trouble-free feeding on a variety of wires.

74 MPa Plus Wire Feeder Features

S-74 MPa Plus single feeder

D-74 MPa Plus dual feeder

MPa Plus models have the features of the S and D models and add the following

- **Four weld programs** allow the operators to store four independent welding parameters reducing welding setup time. (Four programs available per side on dual feeder.)
- **Adjustable run-in control** for improved arc starts.
- **Adjustable weld sequence control** gives operator complete control of the welding parameters: preflow, run-in, weld time, crater, burnback and postflow.
- **Welding process range control** locks parameters at a set percentage of welding parameters to ensure welding procedures and quality standards are maintained on the shop floor.
- **Dual schedule, trigger dual schedule and trigger program select** allows operator to switch welding parameters without readjusting machine, eliminating downtime and enhancing quality.
- **Push-pull capability** provides consistent, versatile and dependable aluminum wire feeding over greater distances.
- **Synergic pulsed MIG** operation with MPa power supplies. Provides communication between the power source, feeder and gun. As wire speed increases/decreases, the pulse parameters also increase/decrease to match the right amount of power needed.
- **Trigger schedule select** allows the operator to select the alternative schedule by quickly tapping the gun trigger when not welding. When optimized with MPa power sources the operator can also switch from MIG to pulsed MIG.
- **Profile Pulse™** provides TIG appearance with MIG simplicity and productivity. Achieve "stacked dime" weld bead appearance without back-stepping. Profile Pulse frequency can be changed to increase or decrease the spacing between the ripple pattern to achieve the desired weld appearance.
- **Accu-Mate™** properly seats the power pin for best feeding performance and prevents Accu-Mate grooved MIG guns from sliding in the casting.
